

Expertise Catalog

Ecological mindsets, the key to a **successful transition**

Combining environmental and social science approaches to:

-  highlight the many interactions between humans and nature
-  Inform collective and individual choices
-  enable local and global challenges to be transformed into opportunities.

We are a team of around twenty people: multicultural, multidisciplinary and convinced that climate, ecological and social transitions are multiple and closely linked.

Action areas

We support regions in the protection, resilience and sustainable use of natural resources and ecosystems in four fields of intervention:

Developing our connection to the ocean to improve its protection, from a landsea perspective

Linking water management to regional development to promote a sustainable future

Giving operational reality to resilience and adaptive capacity

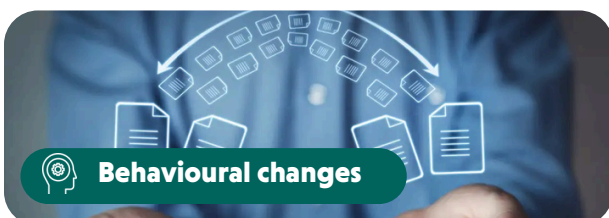

Understanding the services provided by ecosystems to support broader societal transformation

We pay particular attention to two levers for successful ecological and climate transitions:

Moving from the dissemination of knowledge to making it actionable. Developing, upscaling and accelerating innovations.

The ecological and climate transition depends on our choices!

Our philosophy

At the heart of ecological and climate transitions, we promote iterative and collective learning processes based on listening, understanding and dialogue between stakeholders. We value innovative solutions that address collective issues and are adapted to different contexts.

Our offer for local authorities

Between resource scarcity, conflicts of use, environmental protection and multiple regulatory frameworks, the decisions that local authorities have to make are becoming increasingly complex.

Our approach combines scientific expertise, strategic support and facilitation of stakeholder engagement processes to help local authorities develop tailored responses based on solid data, a shared vision and concrete solutions that are both sustainable and acceptable.

Understand

Do you need to better understand the levers you can use to make your ecological transition a success?

Do you need support you in the evaluation your environmental policies or initiatives?

Evaluate

Share

Do you need assistance sharing your actions and experiences with local stakeholders or citizens.

Do you need help developing or implementing your projects?

Support

Our offer for private companies

Balancing profitability and protecting natural environments, in a context of resource scarcity, climate change and significant regulatory instability, makes strategic management of private companies more difficult.

Our approach combines scientific expertise, innovation, a culture of change and knowledge of territorial governance to develop tailor-made solutions for businesses of all sizes, based on solid data, a shared vision and pragmatic, sustainable and acceptable solutions.

Understand

Do you need to better understand the levers you can use to make your ecological transition a success?

Do you want to evaluate your environmental actions or interventions?

Evaluate

Share

Do you want to share your actions and experiences with your customers and partners?

Do you need help developing or implementing your projects?

Support

Our offer for research organisations

Between societal expectations, demands for knowledge transfer and application, and requirements to demonstrate the impact and added value of research activities, the pressures on researchers and research organisations are becoming increasingly numerous.

Our approach at the interface between science and society, our ability to disseminate research results to users and decision-makers, our experience in managing research projects, and our knowledge of territorial governance governance, are directed to making research results useful, usable, and used.

Understand

Do you need to position your research work within a given ecosystem of actors or territory?

Do you want to assess the impact of your results in other disciplines (economics, sociology, etc.)?

Evaluate

Share

Do you wish to popularise, share or organise an event based on your research findings?

Do you need support in developing or implementing your projects, particularly European ones?

Support

Our offer for European institutions

Between the scarcity of natural resources, tensions over their use, sustainability objectives, and the heterogeneity of regulatory frameworks between Member States, the decisions to be taken at European level are becoming increasingly complex.

Our approach combines scientific expertise, strategic support and facilitation of multi-stakeholder dialogue to inform public policy and support the implementation of concrete solutions based on robust data, a shared European vision and a constant focus on consistency, effectiveness and acceptability.

Understand

Would you like to identify the most effective levers for accelerating the ecological transition within the EU, taking into account regional specificities and European policy frameworks?

Do you have to evaluate the performance of public policies or governance frameworks that have been put in place?

Evaluate

Share

Would you like to promote your actions and share your feedback with local stakeholders, European citizens and other institutions at all spacial scales of the Union?

Do you wish to be assisted in developing or implementing your projects?

Support

Innovation transfer

Understanding the obstacles and levers for scaling up

We analyze the obstacles and opportunities for the dissemination of knowledge and innovations, and assess the conditions for their scaling up. We focus on social and technological innovations and their associated processes, as well as knowledge transfer between different actors. We provide in-depth information on how these operate and identify pathways for their scaling up.
